

HOW DOES YOUR COMPANY COMMUNICATE ON THE TELEPHONE ?

For economical reasons, many new or small enterprises are using an Audio-CD or even an I-Pod as their Music on-Hold system for their telephones.

The fact of the matter is that both these products weren't designed to play day and night, 7 days out of 7! Inevitably, soon the system will stop playing and a replacement will be needed.

So why not tackle the matter from scratch in a professional way with our **VGP20** ?

- Reliable Solid State technology, absolutely no moving parts
- Designed to work 24/7. No batteries to fail or overheat
- Auto start after power cut.
- CD audio quality. Also plays Stereo files for in-store marketing applications
- Reads mp3 files from a 1GB SD card , able to store many hours of audio.
- Plug and Play, as it comes with 2 audio tracks with a welcoming messages, mixed with Royalty Free music
- Updates or add new files from a PC/Laptop with a flash card reader
- Built-in switchable speakers, for monitoring with volume control
- 3 outputs to choose from, to match different MOH inputs of PBX
- among which 2 outputs are protected with 600 Ohm isolation transformer
- Several versions available for different service levels to create and/or update your MOH files.
- Supplied with Power Supply Adapter and audio jack connection cable
- Shelf or easy wall mounting.
- Costing less than an I-Pod or a CD-player

Pick your version...

The **VGP20 "Satellite"** version:
the first professional MOH system with the best price/performance ratio on the market

The **"Custom"** versions, identical to the "Satellite" version but supplied with one or several prepaidpacks of personal message vouchers, providing access to native spoken tongue artists whom will record your messages in our Studio.
Please go to www.voicegearstudio.eu and see how easy it can get.

Still hesitating to acquire a PBX? Then you need to know more about our **VGP30**, being the first MOH system able to work either any single desktop phone, or on any PBX
(fitted with a MOH input).
