

When there is a lot to say, pictures speak louder than words. Although printing brochures, posters or any other graphic expression can provide results, moving pictures shown in a high resolution slide presentation or a video, will attract your customers' attention even more. Marketing surveys have allowed to conclude that 75% of the purchase decisions are made at the Point-of-Sale. By informing clients on the spot about new products and promotions, your clients will always be allowed to make the right choice.

The VGP-100 is a versatile stand-alone digital media player, capable to run audio, video and digital photo slides in autoplay. By connecting it to a TV or video screen, you can show your customers your company logo, your product photos and demos, graphics and images, and your information will never be ignored again. Run a promotional video and tell shoppers that you care about quality and services and why you are so good in what you are doing. Thinking about a new "shop-in-shop" concept? Integrate our system into to the concept and you will love the sales results. So waste no more time waiting for printed matters when digital text and picture slides or even videos will be shown on the VGP-100 in less than no time and at the fraction of the cost.

Professionals know how important it is to keep things simple to make a professional business impression. **Voicegear** therefore offers you an array of flexible products which can be set up in display windows, shopping malls, business centres or trade fairs and that at a fraction of the cost of printing glossy brochures and posters. Ask for our separate brochure on our flat screen combos available in different sizes, with a VGP-100 player built-in
