

Now your visitors will see that you mean business...

First impressions count, so what your customers see when they visit and what they hear when they call, can be vital. The VGP70 will perform these two tasks simultaneously.

With a traditional on-hold player you can create a professional image for your company and keep your callers informed of the latest offers while they wait.

But **voicegear's** VGP70 is anything but traditional because it offers :

11 Royalty-free on-hold audio tracks

Pre-recorded welcoming messages in 7 languages

PineWoodStudio mixing software to create your own on-hold audio mixes

Create in minutes your generic messages on PC with our **gear2voice** software

Save your files to six formats of flash memory cards and there's more :

The VGP70 will display your products and services at reception or shop window, using digital photographs which can be played in a slide show, or a digital video saved to a flash memory card. There's no need to use an expensive computer—simply connect the VGP70 to the on-hold audio of your PBX and the video output to a TV or video monitor

Your customers will be kept entertained and informed while they wait, and like your callers, know that you mean business.

The VGP-70 will play files recorded to a CF, IBM Micro Drive, SM, MMC, SD and MS flash memory cards.

Video Format Support : MPEG1, MPEG2, MPEG4

Graphics Format Support : JPEG

Audio Format : Mp3

All units are shipped with an IR-Remote control

a pre-recorded 256Mb CF card with 3 MOH mix files

an external 220/240 AC/12VDC power supply

The VGP-70 is available in 3 versions according to your needs

...and your callers will hear that you mean business too!
